CelluTEC[™] & CelluTEC HFRF Series Filter Cartridges

Cellulosic Filter Cartridges

The CelluTEC is dual layered with cellulosic media that contains DE (Diatomaceous Earth) and polypropylene media to provide enhanced filtration. Graver CelluTEC cartridges are designed for high loading applications to replace large lenticular filters. The cellulosic filter media is pleated in two cartridge size options, 2.7" (Standard) and 6" High Flow RF cartridges to make testing and scale up easy to evaluate and implement. The CelluTEC's combination of material allows for high flow rates and high efficiency of filtration for particulate removal. The DE embedded in the Cellulosic layer helps trap impurities within the filter. CelluTEC cartridge are a well-designed solution for industrial filtration tasks where efficient particulate removal are crucial.

CelluTEC (STANDARD) FLOW RATE

The efficiency graph shows the retention of various particle sizes. This was determined through laboratory testing. Under actual field conditions, results may vary somewhat from the values shown due to the variability of filtration parameters. Testing was conducted using the single-pass test method, water at 3 gpm/10" cartridge. Contaminants included latex beads, coarse and fine test dust. Removal efficiencies were determined using dual laser source particle counters.
